Abstract

An abstract of the report.

Assentation of Teamwork

Here, you explain how each member in the group has contributed to the project.

1 Introduction

Here, you explain briefly the target problem and motivation to solve it via Deep Learning.

2 Preliminaries and Problem Formulation

Here, you formulate the problem. Specify the ultimate goal. If there are some new concepts that you had to learn to understand this project, you could briefly explain them.

3 Design

You explain the details of your design, plot diagrams if needed and name the key components.

4 Methodology

You should explain the algorithms you have used in your design and include pseudo-code if necessary. If an algorithm is new, you should briefly explain it. You may also name the specific modules and/or libraries you have used for implementation.

5 Numerical Experiments

You explain the experiments you have conducted to check your implemented design. You must also specify all values and parameters you have considered in the simulation, plot the learning curves or show the test values in the form of tables. If you have a demo test, you could also present it here. Also, if you compare your implementation against a benchmark or a reference setting, you should explain what the benchmark is and specify how you got the results for the benchmark (it's all OK if you get the result for the benchmark from an already implemented code or copy it from a paper, you should just cite them).

Figure 1: Sample figure caption.

Table 1: Sample table title

Part		
Architecture	Result 1	Result 2
CNN	1%	1%
ResNet	1%	1%
LSTM	1%	

5.1 Including Figures

5.2 Including Tables

6 Discussion

You may include answer to research questions here.

7 Conclusions

You should shortly conclude what you learned during project. Also, if you have any idea for further improvement of the results or extension, you may mention it here.

References

Include all references here. It's important to have your references cited.
